Modest Changes in Views of Impeachment Proceedings Since Early September

54% approve of House decision to conduct inquiry
About Pew Research Center

Pew Research Center is a nonpartisan fact tank that informs the public about the issues, attitudes and trends shaping the world. It does not take policy positions. The Center conducts public opinion polling, demographic research, content analysis and other data-driven social science research. It studies U.S. politics and policy; journalism and media; internet, science and technology; religion and public life; Hispanic trends; global attitudes and trends; and U.S. social and demographic trends. All of the Center’s reports are available at www.pewresearch.org. Pew Research Center is a subsidiary of The Pew Charitable Trusts, its primary funder.

© Pew Research Center 2019
Most Americans have not changed their views on whether the House should conduct impeachment proceedings against President Donald Trump since early September, before House Speaker Nancy Pelosi announced that the House would conduct an impeachment inquiry of the president.

But about one-in-ten adults (9%) who had opposed the House opening impeachment proceedings last month now approve of the decision to conduct an impeachment inquiry, based on an analysis that tracks change in opinion among the same survey respondents over time.

Most of those who had opposed opening impeachment proceedings and now approve of the decision are Democrats and Democratic-leaning independents (61%); about a third (32%) are Republicans and Republican leaners.

The new survey by Pew Research Center, conducted Oct. 1-13 among 3,487 adults, finds that 54% currently approve of the House’s decision to conduct an impeachment inquiry, while 44% disapprove.

Neither party engenders a great deal of confidence that they will be “fair and reasonable” during the impeachment inquiry, the survey finds. About four-in-ten (43%) expect that the Republicans in Congress will be fair in handling the inquiry, while slightly more (47%) say the same about the Democrats in Congress.

The survey, conducted on Pew Research Center’s American Trends Panel, enables us to examine opinions about impeachment among the same group of respondents over the past month. In an earlier wave of the online survey conducted in early September (Sept. 3-15) – before details about Trump’s call with Ukrainian President Volodymyr Zelensky were made public and Pelosi announced that the House would be moving forward with the inquiry – respondents were asked...
a somewhat different question about whether they favored or opposed the House conducting impeachment proceedings against Donald Trump.

In that survey, 50% said they favored the House launching impeachment proceedings, while an identical share was opposed. The vast majority of those who now either approve or disapprove of the House conducting an impeachment inquiry (85%) held similar views in early September.

Overall, 45% approve of the impeachment inquiry today and favored the House starting impeachment proceedings then; this group largely consists of Democrats (89% are Democrats or Democratic leaners). Nearly as many (40%) disapprove of the impeachment inquiry now and opposed impeachment proceedings in early September; the vast majority of this group (90%) are Republicans and Republican leaners.

Democrats make up a majority of those who now approve of the House decision to begin an impeachment inquiry but opposed proceedings in early September

---

**Notes:** September survey was fielded prior to Speaker Nancy Pelosi’s announcement about opening an impeachment inquiry (Sept. 3-15). There are not enough cases to look at the partisan composition of those who favored impeachment in September and disapprove in October. Source: Survey of U.S. adults conducted Oct. 1-13, 2019.
However, 9% approve of the House’s decision to conduct an impeachment inquiry against Trump and opposed starting proceedings last month. As noted, Democrats make up most of this group: 35% identify as Democrats, 26% lean Democratic, 21% lean to the Republican Party and just 10% identify as Republicans.

A much smaller share of the public (4%) currently disapproves of the House decision to begin an impeachment inquiry, but favored the House opening impeachment proceedings last month.
Little confidence in either party to be ‘fair’ on impeachment

About four-in-ten (43%) expect that the Republicans in Congress will be fair and reasonable in handling the inquiry; 57% say they are not too confident or not at all confident. Nearly half (47%) are at least somewhat confident that congressional Democrats will be fair, while 52% have little or no confidence in the Democrats.

These views are deeply divided by party. About seven-in-ten Republicans and Republican leaners (71%) say they are at least somewhat confident in congressional Republicans to be fair, but only 22% say they are very confident. By contrast, 90% of Republicans express little or no confidence in Democrats in Congress – with 67% saying they are not at all confident.

Among Democrats and Democratic leaners, 81% are at least somewhat confident in congressional Democrats to be fair, while an identical share has little or no confidence in congressional Republicans. However, fewer Democrats say they are very confident in congressional Democrats (34%) than say they are not at all confident in congressional Republicans (45%).

Note: No answer responses not shown.
Partisans generally have confidence in their own party – and little confidence in the opposing party – to handle the impeachment inquiry fairly and reasonably.

Among the public overall, 35% have confidence in congressional Democrats – but not the Republicans – to act in a fair and reasonable way during the impeachment inquiry, while 31% express confidence in the Republicans but not the Democrats.

About two-thirds of partisans express confidence in their own party but not the other (64% of Republicans and Republican leaners and 65% of Democrats and Democratic leaners).

Nearly one-in-five Americans (21%) are not too confident or not at all confident that either Republicans or Democrats will act fairly and reasonably during the impeachment proceedings, while about one-in-ten (12%) are at least somewhat confident that both parties will act fairly.

Republicans are more likely than Democrats to say that neither party will act fairly (26% vs. 16%). Democrats, on the other hand, are more likely than Republicans to say that they have confidence in both parties (16% vs. 7%).

Note: No answer responses not shown.
Most Democrats say Trump has definitely done things that are ‘grounds for impeachment’

Partisanship is by far the most important factor in public attitudes about the impeachment inquiry.

Currently, 89% of Democrats and Democratic leaners approve of the House’s decision to conduct an impeachment inquiry; slightly fewer Republicans and Republican leaners (84%) disapprove of the House beginning an inquiry.

Partisan opinions are less symmetrical on whether Trump has definitely or probably “done things that are grounds for impeachment.”

While 93% of Democrats say Trump has definitely or probably done things that are grounds for impeachment – including 70% who say he has definitely done such things – a smaller majority of Republicans (80%) say he has not. Fewer than half of Republicans (46%) say Trump has definitely not done things that are grounds for impeachment.
There are age and educational differences in opinions about the House’s decision to launch and
impeachment inquiry. A majority of adults under 30 (63%) approve of the House’s
decision; older age groups are less
supportive. And those who have completed
college are more likely to approve of the
impeachment inquiry than adults who do not
have a four-year degree (61% vs. 51%).

While majorities of Republicans and
Republican leaners across all age categories
disapprove of the impeachment inquiry, there
is more support for the inquiry among young
Republicans (30% of those younger than 30)
than those 65 and older.

Democrats’ views of impeachment do not
vary as much by age, but the support for
impeachment is slightly lower among those
with no college experience compared with
those who have attended at least some
college.

The partisan gap in views of impeachment is
more pronounced among those who say they
have read or heard a lot about it compared
with those who say they have only heard a
little or nothing at all.

Among the over half of Republicans who have heard a lot about impeachment, just 10% approve
of the impeachment inquiry; about twice as many (22%) Republicans who have heard less about
impeachment approve of the probe. Democrats who have heard a lot about impeachment are 10
percentage points more likely to approve of it than Democrats who have heard little or nothing
about it (94% vs. 84%).

PEW RESEARCH CENTER
A large majority of political independents – those who decline to identify with one of the two major parties when asked – say they lean toward one of the parties. These independent leaners look much like partisans in their attitudes across a range of different issues. Attitudes about impeachment are no exception to this general pattern. Overall, 57% of those who do not identify with one of the two major parties approve of the impeachment inquiry. But independents who lean toward either the Republican or Democratic Party are very distinct in their views of impeachment.

Democrats (91% approve) and Democratic leaners (85%) have similar views of the impeachment inquiry. While independents who lean toward the Republican Party are somewhat more likely to approve of the impeachment inquiry than Republican identifiers (25% of leaners compared with 9% of identifiers), the gap in approval between Republican-leaning independents and Democratic-leaning independents is 60 percentage points.

Like partisans, independents who lean toward a party are polarized in their views of an impeachment inquiry

Methodology

The American Trends Panel survey methodology

The American Trends Panel (ATP), created by Pew Research Center, is a nationally representative panel of randomly selected U.S. adults. Panelists participate via self-administered web surveys. Panelists who do not have internet access at home are provided with a tablet and wireless internet connection. The panel is being managed by Ipsos.

Data in this report are drawn from respondents to panel waves conducted September 3 to September 15, 2019, and October 1 to October 13, 2019. Out of 3,954 panelists who were sampled, a total of 3,487 panelists responded to both waves, for a combined response rate of 88%. This does not include three panelists who were removed from the data due to extremely high rates of refusal of straightlining. The cumulative response rate accounting for nonresponse to the recruitment surveys and attrition is 5.9% for the September wave and 4.9% for the October wave. The break-off rate among panelists who logged onto the survey and completed at least one item is 0.8% for the September wave and 0.9% for the October wave. The margin of sampling error for the full sample of 3,487 respondents is plus or minus 2.2 percentage points.

Note: Approximately once per year, panelists who have not participated in multiple consecutive waves or who did not complete an annual profiling survey are removed from the panel. Panelists also become inactive if they ask to be removed from the panel.

The sample consisted of all existing panelists who had completed the annual profile survey as of September 9, 2019. Panelists who had not yet completed the profile survey were ineligible. A subsample from the ATP was selected by grouping panelists into six strata so demographic groups that are underrepresented in the panel had a higher probability of selection than overrepresented groups:

- Stratum A consists of panelists that completed interviews for previous ATP Waves 17, 33, or 34. They were sampled at a rate of 100%.
- Stratum B consists of panelists who are non-internet users. They were sampled at a rate of 72%.
▪ Stratum C consists of panelists with a high school education or less. They were sampled at a rate of 64.7%.
▪ Stratum D consists of panelists that are Hispanic, unregistered to vote, or non-volunteers. They were sampled at a rate of 26.6%.
▪ Stratum E consists of panelists that are black or 18-34 years old. They were sampled at a rate of 12.8%.
▪ Stratum F consists of the remaining panelists. They were sampled at a rate of 9.6%.

The ATP was created in 2014, with the first cohort of panelists invited to join the panel at the end of a large, national, landline and cellphone random-digit-dial survey that was conducted in both English and Spanish. Two additional recruitments were conducted using the same method in 2015 and 2017, respectively. Across these three surveys, a total of 19,718 adults were invited to join the ATP, of which 9,942 agreed to participate.

In August 2018, the ATP switched from telephone to address-based recruitment. Invitations were sent to a random, address-based sample (ABS) of households selected from the U.S. Postal Service’s Delivery Sequence File. In each household, the adult with the next birthday was asked to go online to complete a survey, at the end of which they were invited to join the panel. For a random half-sample of invitations, households without internet access were instructed to return a postcard. These households were contacted by telephone and sent a tablet if they agreed to participate. A total of 9,396 were invited to join the panel, and 8,778 agreed to join the panel and completed an initial profile survey. Of the 18,720 individuals who have ever joined the ATP, 10,588 remained active panelists and continued to receive survey invitations at the time this survey was conducted.

The U.S. Postal Service’s Delivery Sequence File has been estimated to cover as much as 98% of the population, although some studies suggest that the coverage could be in the low 90% range.¹

Weighting

The ATP data were weighted in a multistep process that begins with a base weight incorporating the respondents’ original survey selection probability and the fact that in 2014 and 2017 some respondents were subsampled for invitation to the panel. The next step in the weighting uses an iterative technique that aligns the sample to population benchmarks on the dimensions listed in the accompanying table.

Sampling errors and test of statistical-significance take into account the effect of weighting. Interviews are conducted in both English and Spanish, but the American Trends Panel’s Hispanic sample is predominantly U.S. born and English speaking.

In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.
